## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujita et al. (USPN 5,109,148) in view of Puzozzo et al. (USPN 4,851,637) and Serruys (USPN 6,046,428).

Fujita et al. discloses a laser machining apparatus with a positioning device. The apparatus has a frame, a back "wall" (37), an arm (38), a laser machining unit (9), and a machining (X-Y) table (34). The work is carried on the table with a drive mechanism. Translation is in the X and Y directions. In addition, vertical direction comes from movement of the laser machining unit.

Fujita et al. does not teach the use of a grid or unloading/loading with forks.

Puzozzo et al. discloses a workpiece table with a grid system.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use a grid system, as taught by Puzozzo et al. in the Fujita et al. apparatus, because it ensures work accuracy i.e. lining up the work with the grid system.

Serruys discloses a laser cutting device having a movable cutting head, a cutting table for supporting the workpiece, a movable loading and unloading carriage for placing the workpiece. The carriage also has a fork assembly for moving the workpiece.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use a loading/unloading system with a fork, as taught by Serruys in the Fujita et al. apparatus because it is merely a workpiece positioning system.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Alexandra Elve whose telephone number is 571-272-1173. The examiner can normally be reached on 6:30-3:00 Monday to Friday.
